

High Performance Mud Guards With "Flow-Thru" Technology

VORTEX High Performance Mud Guards™

Air And Water Released

Vortex™ Innovation

- Patented aerodynamic design allows air and moisture to travel through the mud guard
- The design deflects the air flow to keep moisture and debris away from the body

Increases Fuel Economy

Traditional Mud Flaps

Trapped Air And Water

The Problem

- Air and debris get trapped in the wheel well
- Provides basic protection to prevent chipping, pitting, and rusting

Decreases Fuel Economy

The mud guard category has not had any innovation for nearly 20 years and consists of traditional mud guards focusing on basic protection and durability for your vehicle. Vortex™ High Performance Mud Guards offer the same protection as traditional mud guards with enhanced innovative features such as "Flow-Thru" technology that delivers an increase in fuel mileage and overall performance.

Beyond the functional advantage of Vortex High Performance Mud Guards, the innovative "Flow-Thru" design is easier to install. The louver doubles as a reference point, eliminating the problem of getting the mud guards plumb and level on all four wheel wells. Available in 3 sizes that accommodate 100% of all vehicles and maximize sales per square foot versus competitive products.

Vortex stands behind its high quality and unbreakable material offering a lifetime warranty.

76009
