

## Product Design Engineer

As a leading automotive aftermarket products manufacturer and marketer, Hopkins Mfg. Corp. is seeking a highly motivated Product Design Engineer, for an exciting career opportunity. As a **Product Design Engineer** you will be given general specifications and cost targets and asked to develop them into consumer products. It will be necessary to understand the product application and add your intuition to create a product that fits both the consumer's desires and price range. This may require acquiring existing products, working with domestic or overseas suppliers to design products, or designing the complete product. You will also be responsible for transitioning the product into production and ongoing production support. Compliance with regulations, project budgets, schedules and patent related activities will also be your responsibility.

Do you have an interest in designing a broad range of new consumer products with full design responsibility for all aspects of the product? Are you willing to be part of the dramatic changes happening in the automotive aftermarket in the next decade? If so this could be the position for you!

### Requirements:

- Bachelor's degree in mechanical engineering or equivalent.
- Minimum of 5 years experience in consumer product design or equivalent.
- An interest in the consumer automotive aftermarket
